Restrictive Measures Provider Requirements (update 10/17/2022)

In accordance with Wisconsin Statutes and Administrative Rules, including Wisconsin State Statutes: Chapters 46.90 (4), 50.09 (1); 51.61 (1); 54; 55.043 (1m, 1r) and Wisconsin Administrative Code: DHS 83.12; DHS 88.10 (3); DHS 88.11; DHS 94.10, members enrolled in Community Care, Inc. programs will be protected from the unnecessary use of restrictive measures.

- All providers/caregivers are expected to refrain from using unnecessary restrictive measures with members, and to assist members in understanding and asserting their right to be free of restraints.
- Use of restrictive measures is a last resort, to be used only when previous attempts at less restrictive measures have been implemented, tracked, and determined insufficient; only to be used for the safety of the member, with prior proper approval.
- Provider/caregivers/teams should not think of restrictive measures as the solution for addressing the dangerous or challenging behavior but should instead think of them as a temporary strategy used to maintain safety.
- Community Care, Inc. Policy and Procedure requirements apply to requests for use of restrictive measures for members who live in community settings in Medicaid-funded adult long-term care programs: Family Care, Family Care Partnership, and PACE (Program of All-Inclusive Care for the Elderly). Community settings include members residing in their owned or rented home, in other supported living arrangements, adult family homes (AFHs), community-based residential facilities (CBRFs), and residential care apartment complexes (RCACs). Community-based vocational settings and day service programs are also community settings.

PROCEDURE: Residential and Other Providers

1. If a contracted residential or other provider identifies a need for use of restrictive measures, the provider must have a Behavior Support Plan (BSP) in place for the Community Care Member. Developed by providers, caregivers, interdisciplinary team staff (IDTS), and including the member and legal decision-maker, as appropriate, the BSP must be reviewed and approved by the IDT. The member participates as a team member in the initial and ongoing development of his/her care plan, including BSP. (See also definition of BSP and component parts.)

2. When the member’s behavior continues to pose an immediate risk of harm to self or others, and previous support strategies attempted via the BSP have not proven effective, the step by step procedures for applying restrictive measures must be added to the plan in collaboration with the IDT and a licensed behavioral health professional. If a contracted residential or other provider identifies a need for restrictive measures, the provider must have a BSP in place for the Community Care, Inc. member.

3. The BSP, including any proposed restrictive measures, along with any additional required documents, is submitted to a preliminary review committee of Community Care, Inc.’s Restrictive Measures Oversight Committee (RMOC), facilitated by the Restrictive Measures Lead. Suggestions for improvement to the plan are communicated to the IDT, providers and caregivers during plan development with assistance provided by the Behavioral Health Resource Team.

4. Residential providers must comply with State statute and administrative rule regarding the use of restrictive measures. This includes the notification and approval requirements outlined in DHS 83.12 and 88.11, and applicable resident rights outlined in DHS 83.32, 88.10(3) (n) and 94.10. Other providers must comply with applicable State statute and administrative rule regarding the use of restrictive measures.
5. The BSP including proposed restrictive measures, and additional required documentation, is submitted to Community Care, Inc.’s RMOC for review, consideration, improvement and local approval. The RMOC meets monthly and as needed. The F-62548 for DQA WAVE approvals are submitted by the provider directly to DQA. When DQA makes a decision, written notice will be sent to the provider only; the provider will be accountable to report DQA’s decision to Community Care, Inc.

6. Community Care’s RMOC reviews restrictive measures proposals and either approves the proposal as submitted, approves the proposal with conditions, request additional information, or denies the proposal. RMOC will consider approving restraints as part of a BSP only if the following conditions are met:
   - A support plan including positive supports accompanies the request for approval of restrictive measures.
   - A restrictive measure is necessary for medical or safety purposes, or for purposes of maintaining community placement.
   - It benefits the member and allows the member to attain or maintain his/her highest level of independent functioning.
   - The provider has first assessed for underlying conditions which may cause symptoms or behaviors that require restrictive measures (behavior that results from an environmental stressor or medical issue).
   - Providers/caregivers have attempted/document alternative methods to minimize or eliminate symptoms/behaviors without success.
   - The proposed restrictive measure is the least restrictive measure.
   - Service providers are not using a restrictive measure for discipline, punishment or convenience or as a substitute for necessary staff.
   - The restrictive measure will be used only during the time necessary and only as approved.
   - Adequate documentation of behaviors and use of restrictive measures is maintained and communicated to the IDT and a plan for review and termination is documented.
   - The plan includes when, how and by whom service providers will be trained to use restrictive measures.
   - The plan includes who can approve use and who can initiate use of the restrictive measure.
   - The member and/or his/her legal decision maker have been informed of the risks and benefits of the restrictive measure and have approved of its use.
   - The plan is signed by the member’s Medical Provider.
   - Documentation is obtained by the IDT showing that training for use of restrictive measures is completed before implementation.

7. RMOC decisions will be in writing, identify each measure reviewed separately, describe reasons for the return or denial, include any conditions of approval along with adequate descriptions of these conditions, and the RM Lead will sign the decision.

8. Denials must also offer information for both the provider and member or legal decision maker to grieve the decision. The communication will provide guidance on what revisions the provider can make to remedy the defects in the returned or denied application.

9. Community Care’s RMOC must approve the provider’s request before the submitting the request to DHS. NOTE: Provider requests to DHS for input, advice, or technical assistance regarding restrictive measures must also come through Community Care, Inc. Bureau of Quality and Oversight, Division of Medicaid Services, Department of Health Service’s designated Leads on Restrictive Measures will approve or deny a request from Community Care through the DHS Restrictive Measures Database (IES).

10. The approval process for restrictive measures is a continuous process that does not end with the approval decision by DHS. The team must continually monitor the use of any approved restrictive measure according
to a member-specific plan that must accompany each submission. Continuous monitoring should address whether or not less restrictive supports are available as an alternative to use of the restrictive measure.

11. If Emergency restrictive measures are used (see definition), the IDT, in cooperation with providers, licensed behavioral health professionals, and administrative staff, will ensure that staff is trained on the process of identifying, responding to, and documenting an emergency situation, and the provider has a written policy on file.

12. Any emergency use of restrictive measures must be reported by the residential or other provider to the IDT within 24 hours.

Grievance Process: Family Care, Family Care Partnership, and PACE program members have the right to file a grievance regarding Community Care, Inc.’s decisions related to the use of a restrictive measure. Community Care, Inc.’s existing grievance process applies to all member grievances related to the use of or denial of use of restrictive measures, other than the decision to suspend use. Community Care, Inc. has a written description of the grievance process and written protocols for explaining member rights, including the right to be free from restrictive measures and the right to prompt and adequate treatment. Members or their legal decision makers who wish to contest Community Care’s decisions related to the use of restrictive measures should follow the grievance process.

Members may file a grievance in any of the following ways:
- Contacting Community Care’s care management staff or the CCI Member Rights Specialist
- Calling MetaStar at 1-888-203-8338

Community Care, Inc.’s contracted Providers are obligated to adhere to this procedure. Failure to do so may result in termination of the Provider’s contract with Community Care, Inc. and when warranted, a consultation with or referral to the Division of Quality Assurance.

NOTE: Community Care, Inc. IDTs reserve the right to deny a provider’s request to use restraints with a member, even if a Behavior Support Plan is created and steps noted above are successfully completed.

Conclusion:

The use of restrictive measures to control or as a response to a person’s behavior is not treatment, nor is it therapeutic. All facilities and programs should become familiar with the changing standards of care and best practice focused on building skills and techniques to de-escalate and redirect behaviors that present safety concerns and work earnestly to promote a trauma-informed culture of care. (DQA publication P-01196)

DEFINITIONS:

Abuse, neglect and exploitation: Abuse may be physical, emotional, financial, or sexual. Abuse may include giving treatment without consent or unreasonable confinement or restraint. Neglect is defined as the failure of a caregiver, as evidenced by an act, omission, or course of conduct, to secure or maintain adequate care, services, or supervision for an individual, including food, clothing, shelter, or physical or mental health care, and creating significant risk or danger to the individual’s physical or mental health. Financial Exploitation is defined as obtaining an individual’s money or property by deceiving or enticing the individual, or by forcing, compelling, or coercing the individual to give, sell at less than fair market value or in other ways convey money or property against his or her will without his or her informed consent.

Behavior Supports: Components of a member’s environment and support strategies intended to assist the member to replace challenging or dangerous behaviors and help the member attain their desired quality of life.
Behavior supports may include, but are not limited to, assistance with communicating with others, expanding the opportunities for developing relationships, improving the quality of living environments, schedule modification, assisting the member to learn methods to self-calm, or other clinical interventions.

**Behavior Support Plan (BSP):** a written document, specific to the member, intended to inform direct support staff how to assist the member in building pro-social and adaptive behaviors. Behavior plans also include direction on how to utilize supports, strategies, and interventions in order to ensure safety and to decrease the member’s behavior that may be harmful to themselves or others. For members with restrictive measures, the behavior support plan must include information about the use of the restrictive measures. The plan must include a description of the step-by-step procedures for applying or implementing the restrictive measure along with a description of how it will be monitored and the criteria that govern release of the member from the measure. The plan should also identify the maximum duration for the use of the measure. In addition, the plan must address the methods or strategies the team will employ to attempt to reduce or eliminate the restrictive measure.

**Challenging or Dangerous Behavior:** Challenging or dangerous behaviors refer to the member’s behavioral response during an incident that places the member or others at risk of serious harm. Providers must only incorporate restrictive measures into a member’s support plan for use when the member’s behavior puts them or others at imminent risk of serious physical harm. (See also definition of Imminent Risk/Immediate Danger.)

**Contraindication:** A factor that renders the use of a restrictive measure inadvisable, in most instances, determined by a medical professional.

**Member Incident:** As it relates to use of restrictive measures, a member incident is use of an unapproved or emergency restrictive measure. Providers must complete a member incident report and provide to the Community Care team in order to report use of an unapproved or emergency restrictive measure and/or use of an approved restrictive measure in a manner outside of the approved plan.

**De-escalation Strategies:** Strategies direct support staff use to help a member return to a baseline, adaptive, or calm state. Strategies may include direct support staff:
1. Adopting a caring but neutral position.
2. Remaining calm and using a calm tone of voice.
3. Paying attention to the member; listening, focusing on feelings and validating them; empathizing; being nonjudgmental (in both body and verbal language).
4. Assisting the member to use skills they have learned to calm or to cope with the stressful situation.
5. Working to reduce environmental stressors and ensure sensory needs are met.
6. Trying to determine what may have triggered the event and offering solutions or alternatives.
7. Drawing the member into a more pleasant, positive, and grounded state.

**Emergency Restrictive Measure:** An emergency, as it relates to restrictive measures, means an unanticipated situation has occurred where a member suddenly engages in dangerous behavior, placing themselves or others at imminent, significant risk of physical injury. This may include the appearance of a behavior that has not happened for years or has not occurred before, or it could include current behaviors that suddenly and unexpectedly escalate to an intensity the team has not seen before.
**Imminent Risk of Harm:** Imminent risk of harm is an immediate and impending threat of a member causing substantial physical injury to self or others.

**Isolation:** the involuntary physical or social separation of a member from others by the actions or direction of staff, contingent upon behavior. At times, a physical or social separation from others may occur, but the intent of the action must be considered to determine whether isolation is occurring. For examples of what is and is not a restrictive measure, see Wisconsin Department of Health Services (DHS) *Restrictive Measure Guidelines and Standards, Appendix B:* [https://www.dhs.wisconsin.gov/publications/p02572.pdf](https://www.dhs.wisconsin.gov/publications/p02572.pdf)

**Isolation by Staff Withdrawal:** This occurs when the support team determines staff should remove themselves from the area the member is in, due to the presence of imminent risk of harm. When staff withdraws, they go to a predesignated room or area for a specific amount time to allow the member to calm. DHS considers isolation by staff withdrawal to be a restrictive measure when the member is either unlikely to follow, unable to follow, or does not have access to staff after the staff has retreated to the designated area. Typically (but not always) this involves staff locking the door between them and the member. If staff go into an area of the home without locking it because they know the member would never try to enter that area, this would also be a restrictive measure of isolation by staff withdrawal.

**NOTE:** While staff have retreated to the area the member is unwilling or unable to access, they must be able to monitor the member to assure continued safety. If, at any time, staff is not able to monitor the member, staff must leave the secure area to ascertain the member’s safety. When submitting an application for approval of the use of isolation by staff withdrawal, a diagram of the home’s layout or images of the home must be provided to demonstrate how staff monitor the member from the area staff is isolating in. Consideration must also be given to risks to the member’s safety while staff are isolating, such as potential for self-harm or elopement. Consideration must be given to whether the member shares supports and any potential impact staff isolation would have on others.

**Manual Restraint:** A manual restraint, including physical holds and escorts, involves one or more people holding the limbs or other parts of the body of the member in order to restrict or prevent their movement.

DHS does not consider the following actions to be manual restraints or restrictive measures:

1. Holding a member’s limbs or body to provide support for the achievement of functional body positions and equilibrium, such as supporting someone to walk or achieving a sitting or standing position.
2. Holding a member’s limbs or body to prevent him or her from accidentally falling.
3. Use of self-protection and blocking techniques in response to aggressive behaviors.
4. Use of graduated guidance, assisting the member to move, but not restricting body movement or forcing body movement, as part of an approved intervention.

**Mechanical Support:** any apparatus used to provide proper alignment of a member’s body or to help a member maintain their balance. Mechanical supports include but are not limited to, postural supports, position devices, and orthopedic devices. The team must utilize a qualified professional to design a plan for use of mechanical supports in accordance with principles of good body mechanics, with concern for circulation, and with allowance for change in position. Mechanical supports must not impair or inhibit visual or auditory capabilities or prevent or impair speech or other methods of communication.

**Medical Provider:** A medical provider, as it relates to restrictive measures, means a physician, psychiatrist, nurse practitioner, or physician assistant who regularly provides care for the member and is aware of the member’s long term care support needs.
Medical procedure restraints: Medical procedure restraints are utilized to accomplish a specific diagnostic or therapeutic procedure ordered by a medical professional.

NOTE: DHS does not need to approve medical procedure restraints used while under the care of medical professionals in a medical or dental office or while receiving treatment in a clinic or hospital, as long as the medical provider is directing staff who accompanies the member.

Community Care must submit an application to DHS for approval of a medical procedure restraint when the procedure is occurring in the member’s home, day program, or other nonmedical setting. The use of the restraint must only occur for the minimum duration necessary to complete the procedure. If the medical procedure restraint is necessary as a form of behavioral control, this would be Behavioral Restrictive Measure and would require submission of an application for approval and use.

Prohibited Practices: Providers may not use the following maneuvers, techniques, or procedures under any circumstances:

1. Any maneuver or technique that does not give adequate attention and care to the protection of the member’s head
2. Any maneuver, technique, or device that places pressure or weight on the chest, lungs, sternum, diaphragm, back, or abdomen
3. Any maneuver or technique that places pressure, weight, or leverage on the neck or throat, on any artery, on the back of the head or neck, or that otherwise obstructs or restricts the circulation of blood or obstructs an airway, such as straddling or sitting on the torso or any type of chokehold
4. Any maneuver or technique that involves pushing into a member’s mouth, nose, or eyes
5. Any maneuver or technique that utilizes pain to obtain compliance or control, including punching, hitting, hyperextension of joints, or extended use of pressure points
6. Any maneuver or technique that forces a person to remain in a prone (face-down) position
7. Any maneuver or technique that forcibly takes a member from a standing position to the floor or ground (This includes taking a member from a standing position to a horizontal [prone or supine] position or to a seated position on the floor.)
8. Any maneuver or technique that creates a motion causing forcible impact on the member’s head or body or forcibly pushes a member against a hard surface
9. Any use of seclusion where the door to the room would remain locked without someone having to remain present to apply constant pressure or control to the locking mechanism

Protective Equipment: Protective equipment includes devices that restrict movement or limit access to areas of one’s body. Protective equipment refers to devices applied to any part of a member’s body to prevent tissue damage or other physical harm and the member cannot easily remove the device. Protective equipment must not impair or inhibit visual or auditory capabilities or prevent or impair speech or other methods of communication.

Protective equipment includes, but is not limited to:

1. Helmets, with or without face guards
2. Gloves or mitts
3. Enclosed beds
4. Wheelchair seatbelts
5. Shower chair seatbelts
6. Bedrails
7. Wrist cuffs
8. Ankle straps
9. Goggles
10. Pads worn on the body
11. Clothing or adaptive equipment specially designed or modified to restrict access to a body part

The following protective equipment devices are not designated as Restrictive Measures by DHS:
1. Mechanical supports as defined above.
2. Wheelchair seat belts or foot straps, bed rails, and other transportation safety devices such as stretcher belts intended to prevent a member from accidentally falling or slipping during transport.
3. Motor vehicle seat belts or harnesses with buckle guards or similar devices in place to ensure a passenger is unable to remove the safety belt in a moving vehicle.
4. Professionally designed therapeutic devices to promote optimal motor functioning.

Provider: A provider is an individual or agency that receives payment from a Medicaid-funded long-term support program to provide direct support services to a member.

Release Criteria: Criteria specified in the behavior plan, which, once met, would result in the termination of the use of the specific restrictive measure for that incident. The criteria for release should identify cues that are unique to the member for staff to determine if the member is no longer exhibiting behavior that puts someone at imminent risk of harm. Upon release, staff must offer the member the opportunity to move about, the opportunity to have food and drink, and to attend to their other needs.

Staff must release the member from a restrictive measure:
1. If there are any threats to the member’s health or well-being from use of the measure.
2. When the criteria outlined in the plan is met.
3. If the criteria for releasing the member from approved isolation or seclusion have not been met but 60 minutes has passed since the use began.
4. If the criteria for releasing the member from an emergency use of isolation or protective equipment have not been met but 60 minutes has passed since the use began.
5. When the use of an approved or emergency manual restraint has lasted 15 continuous minutes.

Restraint: A restraint is any device, garment, or physical hold that restricts the voluntary movement of, or access to, any part of a member’s body and the member cannot easily remove it.

Restraint to Allow Healing: a restrictive measure used to assist with the treatment of acute medical conditions such as lacerations, fractures, post-surgical wounds, skin ulcers, or infections. The use of a restraint to allow healing must include a protocol for use. The protocol must be for the specific device or procedure, include the rationale for its use, and specify the limited period of time it may be used. Community Care must submit a restrictive measures application to DHS if the restraint to allow healing will be utilized for more than 90 days.

Restrictive Measure: The term used to encompass any type of manual restraint, isolation, seclusion, protective equipment, medical procedure restraint, or restraint to allow healing as defined in this policy.

Restrictive Measure Oversight Committee (RMOC): This refers to Community Care staff, who are responsible for the review and approval of any requests for the use of a restrictive measure prior to submittal to DHS.
Seclusion: Seclusion occurs when staff physically remove a member from others by using a room with locked doors equipped with a pressure-locking mechanism. DHS permits seclusion only with the use of a pressure-locking mechanism that requires the constant manual application of pressure to maintain the locked condition. DHS must inspect all newly constructed seclusion spaces before the space is used. Seclusion does not include the use of devices like “wander guards,” door alarms, or similar products that may notify staff when a member is leaving the home. Appropriate use of seclusion ensures the safety of the member and others due to prolonged physical aggression or to clear an area of harmful items, such as broken glass. The behavior support plan must indicate the method staff uses to transport a member safely to seclusion and staff must have continuous visual monitoring of the member during seclusion.

NOTE: DHS does not permit:
1. Unapproved or emergency use of seclusion.
2. Locking a member in any room where the door would or could stay locked without constant pressure under any circumstance.
3. Situations when the room door would remain closed by staff applying pressure using a part of their body, such as pushing the door closed or holding the door with their foot.
4. Use of seclusion as a form of behavior modification or as a consequence for noncompliance.

For detailed information about seclusion: WI DHS Restrictive Measure Guidelines and Standards, Appendix B.

Staff: any individual who receives payment from a Medicaid-funded long-term support program to provide direct support services to a member. Common examples of staff are providers, provider agency staff, and workers hired by the member.

Supported Living Arrangement: services that offer supports to individuals who require assistance to live in the least restrictive community setting possible and to engage in community life. Examples of supported living arrangement settings include a member’s own home, rented home, or family home.

Team or Interdisciplinary Team (IDT): team or IDT refers to the member, their legal decision maker, if applicable, care management staff, the provider, and any other person the member wishes to be on their team. Teams may include, if possible, the member’s family members, medical provider, other professionals involved with the support of the member, and other people who are significantly involved in the member’s life.

Unapproved Restrictive Measure: Instances of unapproved restrictive measures are when there is a need for a restrictive measure and the team is gathering information for DHS approval or the current restrictive measure expired and is still being utilized.

Voluntary Movement: In relation to restrictive measures, voluntary movements are movements the member is able to control and that are purposeful.
